

AMERICAN BIRD CONSERVANCY + CORNELL LAB OF ORNITHOLOGY + DEFENDERS OF WILDLIFE + NATIONAL AUDUBON SOCIETY + OVER 150 BIRD AND HABITAT CONSERVATION ORGANIZATIONS

On behalf of American Bird Conservancy and undersigned organizations, please support boosting effective U.S. Fish and Wildlife Service bird conservation programs in the FY 2021 Interior Appropriations bill including the Neotropical Migratory Bird Conservation Act (NMBCA), Migratory Bird Joint Ventures, State and Tribal Wildlife Grants, North American Wetlands Conservation Act (NAWCA), Endangered Species Recovery State of the Birds Activities, and the early detection and control of invasive species. These programs are well-integrated and mutually support each other to promote bird conservation.

Please Increase the Neotropical Migratory Bird Conservation Act to \$6.5 million.

Please Increase Migratory Bird Joint Ventures to \$19.9 million.

Please Increase State and Tribal Wildlife Grants to \$70 million.

Please Increase the North American Wetlands Conservation Act to \$50 million.

Please Increase State of the Birds Activities to \$5 million.

Please Increase Funding for DOI Invasive Species Control by \$10 million.

Please Increase Funding for the Neotropical Migratory Bird Conservation Act to \$6.5 Million

Since 2002, the Neotropical Migratory Bird Conservation Act (NMBCA) has functioned as a matching grant program to fund projects that conserve neotropical migratory birds--those that breed in or migrate through the United States and Canada and spend the non-breeding season in Latin America and the Caribbean. NMBCA has helped conserve 400 species, representing more than 4 billion birds, including some of the most endangered birds in North America. All NMBCA grant requests must be matched with non-federal funds at least 3 to 1, and to date, the match has been 4 to 1. Please support increasing NMBCA to \$6.5 million.

Please Increase Funding for Migratory Bird Joint Ventures to \$19.9 Million

Migratory Bird Joint Ventures are regional partnerships managed by the U.S. Fish and Wildlife Service that identify conservation priorities and carry out projects to reverse population declines of at-risk bird species. The Joint Ventures (JVs) are essential to address the conservation needs of migratory birds, and they leverage significant matching contributions from partner organizations and foundations. Since the program's inception in 1986, Joint Ventures have conserved over 22 million acres of critical habitat for wildlife and people and leveraged 34 dollars of support for every federal dollar spent. We urge that the Migratory Bird Joint Ventures be fully funded at \$19.9 million.

Please Increase Funding for State and Tribal Wildlife Grants to \$70 Million

State and Tribal Wildlife Grants fund is the nation's core program for preventing wildlife from becoming endangered, and supports a wide variety of wildlife-related projects by state fish and wildlife agencies throughout the United States. In order to receive federal funds through the State Wildlife Grants Program, Congress charged each state and territory with developing an "action plan." The State Wildlife Action Plans are the result of a collaborative effort by scientists, sportsmen, conservationists, and other members of the community, and they now guide conservation actions in each state. We respectfully request the Committee allocate \$70 million for FY2021.

Please Increase Funding for the North American Wetlands Conservation Act (NAWCA) to \$50 Million

NAWCA provides funding for conservation projects for the benefit of wetland-associated migratory birds in the United States, Canada, and Mexico. Unfortunately, more than half of the original wetlands in the U.S. have been lost, contributing to the steady decline of migratory birds. NAWCA, in existence since 1989, has preserved over 30 million acres of wetlands by leveraging \$1.6 billion in federal funds with more than \$3.3 billion in partner contributions. We respectfully request the Committee prioritize FY2021 funding for NAWCA at \$50 million.

Please Increase State of the Birds Activities for Critically Endangered Birds to \$5 Million

We greatly appreciate the funding provided in the FY 2020 spending agreement for State of the Birds Activities dedicated to arresting the bird extinction crisis in Hawaii. More than 90 Hawaiian bird species have become extinct, and nine listed Hawaiian bird species are currently in decline. This prompted the U.S. Fish and Wildlife Service to provide \$2.5 million in annual State of the Birds Activities funding since 2009. We request \$5 million per year to fully fund ESA recovery funding for Hawaiian birds.

Please Increase Funding for Invasive Species Early Detection and Response by \$10 Million

Early Detection and Rapid Response (including Eradication) survey for, report, and verify the presence of a non-native species before the founding population becomes established or spreads so widely that eradication is no longer feasible. Rapid Response is then employed to eradicate the founding population of a non-native species from a specific location. We recommend increasing funding for Early Detection and Rapid Response by \$10 million.

Thank you for considering these requests.

Sincerely,
